Profile

Cloud Engineer with 4+ years of experience operating and scaling distributed systems on AWS and Kubernetes, with a focus on reliability, observability, and infrastructure-as-code. Proven track record automating remediation and deployment workflows to reduce incident volume and improve service resilience. M.Sc. in Cyber Security, bringing a security-first lens to infrastructure ownership. Proficient in Python and Bash; actively building toward Golang and GitOps-based delivery (ArgoCD, Helm).

Professional Experience

DigitalOcean

2020/11 – 2025/03

Engineer II

- Operated and supported production cloud infrastructure at scale, contributing to reliability and availability of services relied on by enterprise customers.
- Owned infrastructure-as-code using **Terraform**, building repeatable, auditable deployment workflows across environments — directly analogous to Adobe's Terraform/Kubernetes IaC model.
- Automated deployment and remediation workflows using **GitHub Actions, Jenkins, and Bash**, reducing manual operational effort and incident recurrence.
- Supported containerized workloads on **Kubernetes and Docker**, including deployment, scaling, and production troubleshooting across a distributed service landscape.
- Investigated production incidents across a multi-service environment using **CloudWatch, log analysis, and metrics-based root cause analysis (RCA)**, aligning with Adobe's triage and remediation focus.
- Built monitoring and alerting pipelines using **Prometheus, Grafana, and CloudWatch** to detect and resolve issues before customer impact — matching Adobe's observability stack directly.
- Supported **AWS core services** (EC2, IAM, VPC, S3, Lambda, API Gateway, Load Balancing) underlying microservice architectures.
- Troubleshot **service-to-service networking and web protocols** (HTTP/HTTPS, TCP/IP, DNS, TLS, REST, load balancing) in distributed production systems.
- Managed cloud security posture — IAM, access controls, certificates, encryption — supporting secure, compliant infrastructure at scale.

Technical Skills

- **Container Orchestration & IaC:** Kubernetes, Docker, Terraform, Infrastructure Automation, Reusable Terraform Modules

- **Observability:** Prometheus, Grafana, AWS CloudWatch, Log Analytics, Alerting, Root Cause Analysis (RCA)
- **CI/CD & Automation:** GitHub Actions, Jenkins, Git, CI/CD Pipeline Automation, Deployment Automation, Automated Remediation
- **Cloud Platforms:** AWS (EC2, IAM, VPC, S3, Lambda, API Gateway, Load Balancing)
- **Web Services & Networking:** HTTP/HTTPS, REST, JSON, TCP/IP, DNS, TLS/SSL, Load Balancing, Service-to-Service Networking
- **Scripting & Development:** Python, Bash — building toward Golang for tooling contribution
- **Security & Identity:** IAM, Authentication, Authorization, Certificates, Encryption Concepts
- **Collaboration:** Git, Jira, Confluence, Technical Documentation, Runbooks, Cross-regional team collaboration

Key Achievements

- **Automated Malware Protection Deployment** – Automated rollout of a malware protection system using Terraform, Ansible, and CI/CD pipelines, reducing security incidents across managed customer environments by 40% — demonstrates automated remediation experience relevant to Adobe's self-healing workflow goals.
- **Built the SafeUpdates Deployment Feature** – Designed a Kubernetes/Jenkins-based deployment workflow enabling safer, more reliable production updates, contributing to a 15% increase in customer satisfaction.
- **Designed AWS Security Architecture** – Built a scalable reference architecture (ALB, WAF, Auto Scaling Groups) demonstrating production-ready, resilient cloud infrastructure design.

Education

Arden University	2026/04
<i>Master of Science (M.Sc.) in Cyber Security</i>	
SZABIST	2020/09
<i>Bachelor of Science (B.Sc.) in Computer Science</i>
